MCQ (Single Correct Answer) 107 questions

Q1. RE-NEET 2026

Which of the following statements related to pituitary gland are correct?

(a) It is divided anatomically into adenohypophysis and neurohypophysis

(b) It secretes follicle stimulating hormone

(c) It secretes melanocyte stimulating hormone

(d) It does not secrete prolactin

Choose the correct answer from the options given below :

(A) (b) and (c) only

(B) (a) and (b) only

(C) (a), (b) and (c) only

(D) (c) and (d) only

Open solution

Q2. RE-NEET 2026

Which one of the following statements is incorrect?

(A) β-cells of pancreas secrete insulin

(B) α-cells of pancreas secrete glucagon

(C) α-cells of pancreas secrete insulin

(D) Glucagon stimulates glycogenolysis

Open solution

Q3. RE-NEET 2026

Match List-I with List-II.

List-I	List-II
(A) Excess growth hormone	(I) Reabsorption of water and electrolytes in kidney
(B) Luteinizing hormone	(II) Contraction of uterus during child birth
(C) Vasopressin	(III) Acromegaly
(D) Oxytocin	(IV) Ovulation

Choose the correct answer from the options given below:

(A) A-IV, B-III, C-I, D-II

(B) A-III, B-IV, C-II, D-I

(C) A-III, B-IV, C-I, D-II

(D) A-II, B-IV, C-I, D-III

Open solution

GET IT ON Google Play

Q4. NEET 2026

Open solution

Match List I with List II:

List I		List II	
A.	Cortisol	I.	Stimulates the formation of alveoli in mammary glands
B.	Aldosterone	II.	Produces anti-inflammatory reactions
C.	Cholecystokinin	III.	Stimulates reabsorption of Na^+ and water from renal tubule
D.	Progesterone	IV.	Stimulates secretion of pancreatic enzymes and bile juice

Choose the correct answer from the options given below:

(A) A-III, B-II, C-IV, D-I
(B) A-IV, B-II, C-I, D-III
(C) A-II, B-III, C-IV, D-I
(D) A-II, B-III, C-I, D-IV

Q5. NEET 2025

Open solution

Match List-I with List-II

	List - I		List - II
A	Progesterone	I	Pars intermedia
B	Relaxin	II	Ovary
C	Melanocyte stimulating hormone	III	Adrenal Medulla
D	Catecholamines	IV	Corpus luteum

Choose the correct answer from the options given below :

(A) A-II, B-IV, C-I, D-III
(B) A-III, B-II, C-IV, D-I
(C) A-IV, B-II, C-I, D-III
(D) A-IV, B-II, C-III, D-I

Q6. NEET 2025

Open solution

Consider the following statements regarding function of adrenal medullary hormones:

(A) It causes pupilary constriction.

(B) It is a hyperglycemic hormone.

(C) It causes piloerection.

(D) It increases strength of heart contraction.

Choose the correct answer from the options given below :

(A) A, C and D only **(B)** D only **(C)** C and D only **(D)** B, C and D only

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q7. NEET 2025

Which of the following hormones released from the pituitary is actually synthesized in the hypothalamus?

Open solution

(A) Follicle-stimulating hormone (FSH)
(B) Adrenocorticotropic hormone (ACTH)
(C) Luteinizing hormone (LH)
(D) Anti-diuretic hormone (ADH)

Q8. NEET 2025

Match List-I with List-II.

Open solution

	List - I		List - II
A	Heart	I	Erythropoietin
B	Kidney	II	Aldosterone
C	Gastro-intestinal tract	III	Atrial natriuretic factor
D	Adrenal Cortex	IV	Secretin

Choose the correct answer from the options given below :

(A) A-I, B-III, C-IV, D-II
(B) A-III, B-I, C-IV, D-II
(C) A-II, B-I, C-III, D-IV
(D) A-IV, B-III, C-II, D-I

Q9. NEET 2025

Why can't insulin be given orally to diabetic patients?

Open solution

(A) Because of structural variation
(B) Its bioavailability will be increased
(C) Human body will elicit strong immune response
(D) It will be digested in Gastro-Intestinal (GI) tract

Q10. NEET 2024 (Re-Examination)

Match List-I with List-II.

Open solution

	List - I		List - II
(A)	Epinephrine	(I)	Hyperglycemia
(B)	Thyroxine	(II)	Smooth muscle contraction
(C)	Oxytocin	(III)	Basal metabolic rate
(D)	Glucagon	(IV)	Emergency hormone

Choose the correct answer from the options given below :

(A) A-II, B-I, C-IV, D-III
(B) A-III, B-II, C-I, D-IV
(C) A-IV, B-III, C-II, D-I
(D) A-I, B-IV, C-III, D-II

Q11. NEET 2024 (Re-Examination)

Open solution

Identify the wrong statements :

A. Erythropoietin is produced by juxtaglomerular cells of the kidney

B. Leydig cells produce Androgens

C. Atrial Natriuretic factor, a peptide hormone is secreted by the seminiferous tubules of the testes

D. Cholecystokinin is produced by gastrointestinal tract

E. Gastrin acts on intestinal wall and helps in the production of pepsinogen

Choose the most appropriate answer from the options given below :

(A) D and E only **(B)** A and B only **(C)** C and E only **(D)** A and C only

Q12. NEET 2024

Open solution

Which of the following is not a steroid hormone?

(A) Cortisol **(B)** Testosterone **(C)** Progesterone **(D)** Glucagon

Q13. NEET 2024

Open solution

Given below are two statements : one is labelled as Assertion A and the other is labelled as Reason R :

Assertion A : FSH acts upon ovarian follicles in female and Leydig cells in male.

Reason R : Growing ovarian follicles secrete estrogen in female while interstitial cells secrete androgen in male human being.

In the light of the above statements, choose the correct answer from the options given below :

(A) Both A and R are true and R is the correct explanation of A

(B) Both A and R are true but R is NOT the correct explanation of A

(C) A is true but R is false

(D) A is false but R is true

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q14. NEET 2024

Open solution

Match List I with List II :

	List - I		List - II
A.	Exophthalmic goiter	I.	Excess secretion of cortisol, moon face & hyperglycemia.
B.	Acromegaly	II.	Hypo-secretion of thyroid hormone and stunted growth.
C.	Cushing's syndrome	III.	Hyper secretion of thyroid hormone & protruding eye balls.
D.	Cretinism	IV.	Excessive secretion of growth hormone.

Choose the correct answer from the options given below :

(A) A-I, B-III, C-II, D-IV

(B) A-IV, B-II, C-I, D-III

(C) A-III, B-IV, C-II, D-I

(D) A-III, B-IV, C-I, D-II

Q15. NEET 2023 Manipur

Open solution

Which of the following statements are correct with respect to the hormone and its function?

(A) Thyrocalcitonin (TCT) regulates the blood calcium level.

(B) In males, FSH and androgens regulate spermatogenesis.

(C) Hyperthyroidism can lead to goitre.

(D) Glucocorticoids are secreted in Adrenal Medulla.

(E) Parathyroid hormone is regulated by circulating levels of sodium ions.

Choose the most appropriate answer from the options given below :

(A) (C) and (E) only **(B)** (A) and (B) only **(C)** (B) and (C) only **(D)** (A) and (D) only

Q16. NEET 2023 Manipur

Open solution

Given below are two statements :

Statement I : Parathyroid hormone acts on bones and stimulates the process of bone resorption.

Statement II : Parathyroid hormone along with Thyrocalcitonin plays a significant role in carbohydrate metabolism.

In the light of the above statements, choose the correct answer from the options given below :

(A) Statement I is correct but Statement II is false

(B) Statement I is incorrect but Statement II is true

(C) Both Statement I and Statement II are true.

(D) Both Statement I and Statement II are false.

Q17. NEET 2023

Which of the following are NOT under the control of thyroid hormone?

A. Maintenance of water and electrolyte balance

B. Regulation of basal metabolic rate

C. Normal rhythm of sleep-wake cycle

D. Development of immune system

E. Support the process of RBCs formation

Choose the correct answer from the options given below:

(A) B and C only **(B)** C and D only **(C)** D and E only **(D)** A and D only

Open solution

Q18. NEET 2022 Phase 2

Give below are two statements: one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A): FSH which interacts with membrane bound receptors does not enter the target cell.

Reason (R): Binding of FSH to its receptors generates second messenger (cyclic AMP) for its biochemical and physiological responses.

In the light of the above statements, choose the most appropriate answer from the options given below

(A) (A) is not correct but (R) is correct

(B) Both (A) and (R) are correct and (R) is the correct explanation of (A)

(C) Both (A) and (R) are correct but (R) is not the correct explanation of (A)

(D) (A) is correct but (R) is not correct

Open solution

Q19. NEET 2022 Phase 1

Which of the following are not the effects of Parathyroid hormone?

(a) Stimulates the process of bone resorption

(b) Decreases Ca^{2+} level in blood

(c) Reabsorption of Ca^{2+} by renal tubules

(d) Decreases the absorption of Ca^{2+} from digested food

(e) Increases metabolism of carbohydrates

Choose the most appropriate answer from the options given below:

(A) (a) and (c) only **(B)** (b), (d) and (e) only

(C) (a) and (e) only **(D)** (b) and (c) only

Open solution

Q20. NEET 2021

Erythropoietin hormone which stimulates R.B.C formation is produced by :

(A) Juxtaglomerular cells of the kidney
(B) Alpha cells of pancreas
(C) The cells of rostral adenohypophysis
(D) The cells of bone marrow

Open solution

Q21. NEET 2020 Phase 2

Hormones stored and released from neurohypophysis are :

(A) Prolactin and Vasopressin
(B) Thyroid stimulating hormone and Oxytocin
(C) Oxytocin and Vasopressin
(D) Follicle stimulating hormone and Leutinizing hormone

Open solution

Q22. NEET 2020 Phase 2

Match the following columns and select the correct option :

Column - I	Column - II
(a) Ovary	(i) Human chorionic Gonadotropin
(b) Placenta	(ii) Estrogen & Progesterone
(c) Corpus luteum	(iii) Androgens
(d) Leydig cells	(iv) Progesterone only

(A) (a)-(ii), (b)-(i), (c)-(iv), (d)-(iii)
(B) (a)-(iv), (b)-(iii), (c)-(ii), (d)-(i)
(C) (a)-(i), (b)-(ii), (c)-(iii), (d)-(iv)
(D) (a)-(i), (b)-(iii), (c)-(ii), (d)-(iv)

Open solution

Q23. NEET 2020 Phase 2

Match the following columns and select the correct option :

Column - I	Column - II
(a) Pituitary hormone	(i) Steroid
(b) Epinephrine	(ii) Neuropeptides
(c) Endorphins	(iii) Peptides, proteins
(d) Cortisol	(iv) Biogenic amines

(A) (a)-(iii), (b)-(iv), (c)-(i), (d)-(ii)
(B) (a)-(iv), (b)-(i), (c)-(ii), (d)-(iii)
(C) (a)-(iii), (b)-(iv), (c)-(ii), (d)-(i)
(D) (a)-(iv), (b)-(iii), (c)-(i), (d)-(ii)

Open solution

Q24. NEET 2020 Phase 1

Open solution

Match the following columns and select the correct option

Column-I	Column-II
(a) Pituitary gland	(i) Grave's disease
(b) Thyroid gland	(ii) Diabetes mellitus
(c) Adrenal gland	(iii) Diabetes insipidus
(d) Pancreas	(iv) Addison's disease

(A) (A) → (iii), (B) → (ii), (C) → (i), (D) → (iv)

(B) (A) → (iv), (B) → (iii), (C) → (i), (D) → (ii)

(C) (A) → (ii), (B) → (i), (C) → (iv), (D) → (iii)

(D) (A) → (iii), (B) → (i), (C) → (iv), (D) → (ii)

Q25. NEET 2020 Phase 1

Open solution

Select the correct statement

(A) Glucagon is associated with hypoglycemia.

(B) Glucocorticoids stimulate gluconeogenesis

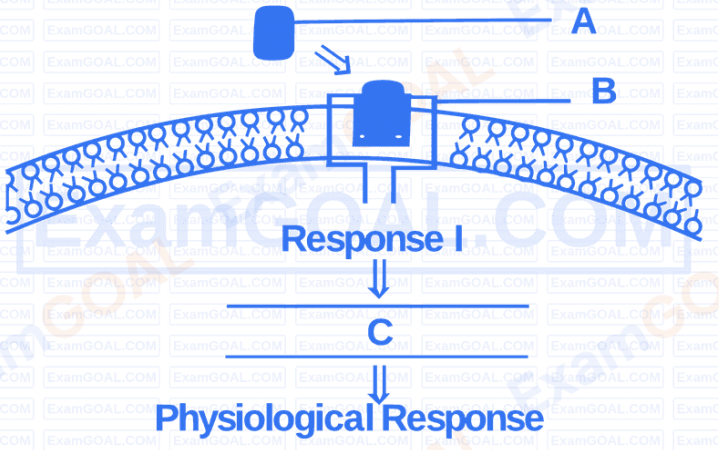

(C) Insulin acts on pancreatic cells and adipocytes.

(D) Insulin is associated with hyperglycemia.

Q26. NEET 2019 (Odisha)

Open solution

Identify A, B and C in the diagrammatic representation of the mechanism of hormone action.

Select the correct option from the following:

(A) A = Protein Hormone; B = Cyclic AMP; C = Hormone-receptor Complex

(B) A = Steroid Hormone; B = Hormone-receptor Complex; C = Protein

(C) A = Protein Hormone; B = Receptor; C = Cyclic AMP

(D) A = Steroid Hormone; B = Receptor; C = Second Messenger

Q27. NEET 2019 (Odisha)

Artificial light, extended work-time and reduced sleep-time disrupt the activity of –

(A) Posterior pituitary gland
(B) Thymus gland
(C) Pineal gland
(D) Adrenal gland

Open solution

Q28. NEET 2019 (Odisha)

Which of the following conditions will stimulate parathyroid gland to release parathyroid hormone?

(A) Rise in blood Ca^{+2} levels
(B) Fall in active Vitamin D levels
(C) Fall in blood Ca^{+2} levels
(D) Fall in bone Ca^{+2} levels

Open solution

Q29. NEET 2019

Match the following hormones with the respective disease :

(a) Insulin	(i) Addison's disease
(b) Thyroxin	(ii) Diabetes insipidus
(c) Corticoids	(iii) Acromegaly
(d) Growth Hormones	(iv) Goitre
	(v) Diabetes mellitus

Open solution

Select the correct option.

(A)

(a)	(b)	(c)	(d)
(v)	(iv)	(i)	(iii)

(B)

(a)	(b)	(c)	(d)
(ii)	(iv)	(i)	(iii)

(C)

(a)	(b)	(c)	(d)
(v)	(i)	(ii)	(iii)

(D)

(a)	(b)	(c)	(d)
(ii)	(iv)	(iii)	(i)

Keep practising on the ExamGOAL app

Q30. NEET 2019

How does steroid hormone influence the cellular activities?

(A) Activating cyclic AMP located on the cell membrane

(B) Using aquaporin channels as second messenger

(C) Changing the permeability of the cell membrane

(D) Binding to DNA and forming a gene-hormone complex

Open solution

Q31. NEET 2019

Which of the following glucose transporters is insulin-dependent?

(A) GLUT III (B) GLUT IV (C) GLUT I (D) GLUT II

Open solution

Q32. NEET 2018

Which of the following is an amino acid derived hormone?

(A) Ecdysone (B) Estriol (C) Epinephrine (D) Estradiol

Open solution

Q33. NEET 2018

Which of the following hormones can play a significant role in osteoporosis?

(A) Estrogen and parathyroid hormone (B) Aldosterone and prolactin

(C) Progesterone and aldosterone (D) Parathyroid hormone and prolactin

Open solution

Q34. NEET 2017

GnRH, a hypothalamic hormone, needed in reproduction, acts on

(A) anterior pituitary gland and stimulates secretion of LH and FSH

(B) posterior pituitary gland and stimulates secretion of oxytocin and FSH

(C) posterior pituitary gland and stimulates secretion of LH and relaxin

(D) anterior pituitary gland and stimulates secretion of LH and oxytocin.

Open solution

Q35. NEET 2017

Hypersecretion of growth hormone in adults does not cause further increase in height, because

(A) epiphyseal plates close after adolescence

(B) bones loose their sensitivity to growth hormone in adults

(C) muscle fibres do not grow in size after birth

(D) growth hormone becomes inactive in adults.

Open solution

Q36. NEET 2017

A temporary endocrine gland in the human body is

(A) corpus cardiacum (B) corpus luteum (C) corpus allatum (D) pineal gland.

Open solution

Q37. NEET 2016 Phase 2

Graves' disease is caused due to

(A) hyposecretion of thyroid gland
(B) hypersecretion of thyroid gland
(C) hyposecretion of adrenal gland
(D) hypersecretion of adrenal gland.

Open solution

Q38. NEET 2016 Phase 2

Name a peptide hormone which acts mainly on hepatocytes, adipocytes and enhances cellular glucose uptake and utilisation.

(A) Insulin (B) Glucagon (C) Secretin (D) Gastrin

Open solution

Q39. NEET 2016 Phase 2

The posterior pituitary gland is not a 'true' endocrine gland because

(A) it is provided with a duct
(B) it only stores and releases hormones
(C) it is under the regulation of hypothalamus
(D) it secretes enzymes.

Open solution

Q40. NEET 2016 Phase 1

Which of the following pairs of hormones are not antagonistic (having opposite effects) to each other?

(A) Aldosterone - Atrial Natriuretic Factor
(B) Relaxin - Inhibin
(C) Parathormone - Calcitonin
(D) Insulin - Glucagon

Open solution

Q41. NEET 2016 Phase 1

The amino acid tryptophan is the precursor for the synthesis of

(A) estrogen and progesterone
(B) cortisol and cortisone
(C) melatonin and serotonin
(D) thyroxine and triiodothyronine.

Open solution

Q42. AIPMT 2015

Which one of the following hormones is not involved in sugar metabolism?

(A) Insulin (B) Glucagon (C) Cortisone (D) Aldosterone

Open solution

Q43. AIPMT 2015

Which one of the following hormones though synthesised elsewhere, is stored and released by the master gland?

(A) Prolactin (B) Melanocyte stimulating hormone

(C) Antidiuretic hormone (D) Luteinising hormone

Open solution

Q44. AIPMT 2015 Cancelled Paper

A chemical signal that has both endocrine and neural roles is

(A) epinephrine (B) cortisol (C) melatonin (D) calcitonin.

Open solution

Q45. AIPMT 2014

Identify the hormone with its correct matching of source and function.

(A) Oxytocin - posterior pituitary, growth and maintenance of mammary glands.

(B) Melatonin - pineal gland, regulates the normal rhythm of sleep-wake cycle.

(C) Progesterone - corpus luteum, stimulation of growth and activities of female secondary sex organs.

(D) Atrial natriuretic factor - ventricular wall, increases the blood pressure.

Open solution

Q46. AIPMT 2014

Fight-or-flight reactions cause activation of

(A) the parathyroid glands, leading to increased metabolic rate

(B) the kidney, leading to suppression of renin-angiotensin-aldosterone pathway

(C) the adrenal medulla, leading to increased secretion of epinephrine and norepinephrine

(D) the pancreas leading to a reduction in the blood sugar levels.

Open solution

Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q47. NEET 2013 (Karnataka)

Open solution

Select the option which correctly matches the endocrine gland with its hormone and its function.

(A)

Endocrine gland	Hormone	Function
Placenta	Estrogen	Initiates secretion of the milk

(B)

Endocrine gland	Hormone	Function
Corpus luteum	Estrogen	Essential for maintenance of endometrium

(C)

Endocrine gland	Hormone	Function
Leydig's cells	Androgen	Initiates the production of sperms

(D)

Endocrine gland	Hormone	Function
Ovary	FSH	Stimulates follicular development and the secretion of estr-ogens

Q48. NEET 2013 (Karnataka)

Open solution

Norepinephrine
(i) is released by sympathetic fibres
(ii) is released by parasympathetic fibers
(iii) increases the heart rate
(iv) decreases blood pressure.

Which of the above statements are correct?

(A) (i) and (iii) **(B)** (ii) and (iii) **(C)** (ii) and (iv) **(D)** (i) and (iv)

Keep practising on the ExamGOAL app

GET IT ON Google Play

Q49. NEET 2013 (Karnataka)

Which of the following represents the action of insulin?

(A) Increases blood glucose level by stimulating glucagon production.

(B) Decreases blood glucose levels by forming glycogen.

(C) Increases blood glucose levels by promoting cellular uptake of glucose.

(D) Increases blood glucose levels by hydrolysis of glycogen.

Open solution

Q50. NEET 2013

A pregnant female delivers a baby who suffers from stunted growth, mental retardation, low intelligence quotient and abnormal skin. This is the result of

(A) cancer of the thyroid gland

(B) oversecretion of pars distalis

(C) deficiency of iodine in diet

(D) low secretionn of growth hormone.

Open solution

Q51. NEET 2013

Which of the following statements is correct in relation to the endocrine system?

(A) Non-nutrient chemicals produced by the body in trace amounts that act as intercellular messenger are known as hormones.

(B) Releasing and inhibitory hormones are produced by the pituitary gland.

(C) Adenohypophysis is under direct neural regulation of the hypothalamus.

(D) Organs in the body like gastrointestinal tract, heart, kidney and liver do not produce any hormones.

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q52. NEET 2013

Select the answer which correctly matches the endocrine gland with the hormone it secretes and its function/deficiency symptom.

Open solution

(A)

Endocrine gland	Hormone	Function/ Deficiency symptoms
Thyroid gland	Thyroxine	Lack of iodine in diet results in goitre

(B)

Endocrine gland	Hormone	Function/ Deficiency symptoms
Corpus luteum	Testos-terone	Stimulates spermatogenesis

(C)

Endocrine gland	Hormone	Function/ Deficiency symptoms
Anterior pituitary	Oxytocin	Stimulates uterine contraction during child birth

(D)

Endocrine gland	Hormone	Function/ Deficiency symptoms
Posterior pituitary	Growth hormone (GH)	Oversecretion stimulates ab-normal growth

Q53. AIPMT 2012 Prelims

A person entering an empty room suddenly finds a snake right in front on opening the door. Which one of the following is likely to happen in his neuro-hormonal control system?

Open solution

(A) Sympathetic nervous system is activated releasing epinephrine and norepinephrine from adrenal medulla.

(B) Neurotransmitters diffuse rapidly across the cleft and transmit a nerve impulse.

(C) Hypothalamus activates the parasympathetic division of brain.

(D) Sympathetic nervous system is activated releasing epinephrine and nore pinephrine from adrenal cortex.

Keep practising on the ExamGOAL app

GET IT ON Google Play

Q54. AIPMT 2012 Prelims

Which one of the following pairs of hormones are the examples of those that can easily pass through the cell membrane of the target cell and bind to a receptor inside it (mostly in the nucleus)?

Open solution

(A) Insulin, glucagon
(B) Thyroxine, insulin
(C) Somatostatin, oxytocin
(D) Cortisol, testosterone

Q55. AIPMT 2012 Prelims

What is correct to say about the hormone action in humans?

Open solution

(A) Glucagon is secreted by β-cells of islets of Langerhans and stimulates glycogenolysis.
(B) Secretion of thymosins is stimulated with aging.
(C) In females, FSH first binds with specific receptors on ovarian cell membrane.
(D) FSH stimulates the secretion of estrogen and progesterone.

Q56. AIPMT 2011 Mains

The 24 hour (diurnal) rhythm of our body such as the sleep-wake cycle is regulated by the hormone

Open solution

(A) calcitonin
(B) prolactin
(C) adrenaline
(D) melatonin

Q57. AIPMT 2011 Prelims

Match the source gland with its respective hormone and function and select the correct option.

Open solution

(A)

Source gland	Hormone	Function
Anterior pituitary	Oxytocin	Contraction of uterus muscles during child birth

(B)

Source gland	Hormone	Function
Posterior pituitary	Vasopressin	Stimulates reabsorption of water in the distal tubules in the nephron

(C)

Source gland	Hormone	Function
Corpus luteum	Estrogen	Supports pregnancy

(D)

Source gland	Hormone	Function
Thyroid	Thyroxine	Regulates blood calcium level

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.

Q58. AIPMT 2011 Prelims

Given below is an incomplete table on hormones, their source glands and one major effect of each on human body. Identify the option representing correct grouping of hormone its gland and effect.

Open solution

Gland	Secretion	Effect on body
A	Estrogen	Maintenance of secondary sexual characters
Alpha cells of Islets of Langerhans	B	Raises blood sugar level
Anterior pituitary	C	Over secretion leads to gigantism

(A)

A	B	C
Ovary	Glucagon	Growth hormone

(B)

A	B	C
Placenta	Insulin	Vasopressin

(C)

A	B	C
Ovary	Insulin	Calcitonin

(D)

A	B	C
Placenta	Glucagon	Calcitonin

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q59. AIPMT 2010 Mains

Select the correct matching of a hormone, its source and function.

Open solution

(A)

Hormone	Source	Function
Vasopressin	Posterior pituitary	Increases loss of water through urine

(B)

Hormone	Source	Function
Norepinephrine	Adrenal medulla	Increases heart beat, rate of respiration and alertness

(C)

Hormone	Source	Function
Glucagon	Beta-cells of Islets of Langerhans	Stimulates glycogenolysis

(D)

Hormone	Source	Function
Prolactin	Posterior pituitary	Regulates growth of mammary glands and milk formation in females

Q60. AIPMT 2010 Prelims

Injury to adrenal cortex is not likely to affect the secretion of which one of the following?

Open solution

(A) Aldosterone

(B) Both androstenedione and dehydroepiandrosterone

(C) Adrenaline

(D) Cortisol

Q61. AIPMT 2010 Prelims

Which one of the following pairs is incorrectly matched?

Open solution

(A) Glucagon – Beta cells (source)

(B) Somatostatin – Delta cells (source)

(C) Corpus luteum – Relaxin (secretion)

(D) Insulin – Diabetes mellitus (disease)

Q62. AIPMT 2010 Prelims

Toxic agents present in food which interfere with thyroxine synthesis lead to the development of

Open solution

(A) toxic goitre

(B) cretinism

(C) simple goitre

(D) thyrotoxicosis.

Q63. AIPMT 2009

A health disorder that results from the deficiency of thyroxine in adults and characterised by (i) a low metabolic rate, (ii) increase in body weight and (iii) tendency to retain water in tissues is

(A) simple goitre (B) myxoedema (C) cretinism (D) hypothyroidism.

Open solution

Q64. AIPMT 2008

Which one of the following pair of organs includes only the endocrine glands?

(A) Thymus and testes (B) Adrenal and ovary
(C) Parathyroid and adrenal (D) Pancreas and parathyroid

Open solution

Q65. AIPMT 2008

The blood calcium level is lowered by the deficiency of

(A) both calcitonin and parathormone (B) calcitonin
(C) parathormone (D) thyroxine.

Open solution

Q66. AIPMT 2007

Feeling the tremors of an earthquake a scared resident of seventh floor of a multistoryed building starts climbing down the stairs rapidly. Which hormone initiated this action?

(A) Adrenaline (B) Glucagon (C) Gastrian (D) Thyroxine

Open solution

Q67. AIPMT 2007

A person is having problems with calcium and phosphorus metabolism in his body. Which one of the following glands may not be functioning properly?

(A) Parotid (B) Pancreas (C) Thyroid (D) Parathyroid

Open solution

Q68. AIPMT 2007

A sequential expression of a set of human genes occurs when a steroid molecule binds to the

(A) messenger RNA (B) DNA sequence (C) ribosome (D) transfer RNA

Open solution

Q69. AIPMT 2006

Which hormone causes dilation of blood vessels, increased oxygen consumption and glucogenesis?

(A) Glucagon (B) ACTH (C) Insulin (D) Adrenaline

Open solution

Q70. AIPMT 2006

Which of the following is an accumulation and release center of neurohormones?

(A) Anterior pituitary lobe
(B) Posterior pituitary lobe
(C) Intermediate lobe of the pituitary
(D) Hypothalamus

Open solution

Q71. AIPMT 2006

A steroid hormone which regulates glucose metabolism is

(A) cortisone
(B) cortisol
(C) corticosterone
(D) 11-deoxycorticosterone.

Open solution

Q72. AIPMT 2006

Which one of the following is not a secondary messenger in hormone action?

(A) cAMP
(B) cGMP
(C) Calcium
(D) Sodium

Open solution

Q73. AIPMT 2006

Which one of the following statements is correct?

(A) Endocrine glands regulate neural activity, but not *vice versa.*
(B) Neurons regulate endocrine activity, but not *vice versa.*
(C) Endocrine glands regulate neural activity, and nervous system regulates endocrine glands.
(D) Neither hormones control neural activity nor the neurons control endocrime activity.

Open solution

Q74. AIPMT 2004

Which one of the following hormones is modified amino acid?

(A) Epinephrine
(B) Progesterone
(C) Prostaglandin
(D) Estrogen

Open solution

Q75. AIPMT 2004

Which one of the following pairs correctly matches a hormone with a disease resulting from its deficiency?

(A) Luteinizing hormone - Failure of ovulation
(B) Insulin - Diabetes insipidus
(C) Thyroxine - Tetany
(D) Parathyroid - Diabetes mellitus

Q76. AIPMT 2004

Chemically hormones are

(A) biogenic amines only
(B) proteins, steroids and biogenic amines
(C) proteins only
(D) steroids only

Open solution

Q77. AIPMT 2003

Which one of the following pairs correctly matches a hormone with a disease resulting from its deficiency?

(A) Relaxin – Gigantism
(B) Prolactin – Cretinism
(C) Parathyroid hormone – Tetany
(D) Insulin – Diabetes insipidus

Open solution

Q78. AIPMT 2002

Acromegaly is caused by

(A) excess of STH
(B) excess of thyroxine
(C) deficiency of thyroxine
(D) excess of adrenaline.

Open solution

Q79. AIPMT 2002

Adrenaline directly affects on

(A) S.A. node
(B) β-cells of Langerhans
(C) dorsal root of spinal nerve
(D) epithelial cells of stomach.

Open solution

Q80. AIPMT 2002

When both ovaries are removed from rat then which hormone is decreased in blood?

(A) Oxytocin
(B) Prolactin
(C) Estrogen
(D) Gonadotropin releasing factor

Open solution

Q81. AIPMT 2002

Mainly which type of hormones control the menstrual cycle in human beings?

(A) FSH
(B) LH
(C) FSH, LH, estrogen
(D) progesterone

Open solution

Q82. AIPMT 2000

Melatonin is secreted by

(A) pineal body (B) skin (C) pituitary gland (D) thyroid.

Open solution

Q83. AIPMT 2000

Which gland secretes odorous secretion in mammals?

(A) Bartholins (B) Prostate (C) Anal gland (D) Liver

Open solution

Q84. AIPMT 2000

MSH is secreted by

(A) anterior lobe of pituitary (B) middle lobe of pituitary

(C) posterior lobe of pituitary (D) endostyle.

Open solution

Q85. AIPMT 1999

Cholecystokinin and duocrinin are secreted by :

(A) adrenal cortex (B) thyroid gland (C) pancreas (D) intestine

Open solution

Q86. AIPMT 1999

The function of oxytocin is to help in

(A) growth (B) lactation (C) child birth (D) gametogenesis

Open solution

Q87. AIPMT 1999

The gonadotropic hormones are produced in

(A) interstitial cells of testes (B) adrenal cortex

(C) adenohypophysis of pituitary (D) posterior part of thyroid

Open solution

Q88. AIPMT 1999

Diabetes is due to

(A) iodine deficiency (B) hormonal deficiency

(C) Na^+ deficiency (D) enzyme deficiency

Open solution

Q89. AIPMT 1998

Calcitonin is a thyroid hormone which

(A) elevates potassium level in blood (B) lowers calcium level in blood

(C) elevates calcium level in blood (D) has no effect on calcium

Q90. AIPMT 1998

The hormone that stimulates the stomach to secrete gastric juice is

(A) gastrin (B) renin (C) enterokinase (D) enterogastrone

Open solution

Q91. AIPMT 1998

The contraction of gall bladder is due to

(A) gastrin (B) secretin (C) cholecystokinin (D) enterogastrone

Open solution

Q92. AIPMT 1998

The hormone which regulates the basal metabolism in our body is secreted from

(A) pituitary (B) thyroid (C) adrenal cortex (D) pancreas

Open solution

Q93. AIPMT 1997

Hormones thyroxine, adrenaline and the pigment melanin are formed from

(A) tyrosine (B) proline (C) tryptophan (D) glycine

Open solution

Q94. AIPMT 1996

Which hormone stimulates the secretion of milk from female?

(A) Oxytocin (B) Progesterone (C) LH (D) Prolactin

Open solution

Q95. AIPMT 1995

Which one of the following endocrine glands stores its secretion in the extracellular space before discharging it into the blood?

(A) Testis (B) Thyroid (C) Pancreas (D) Adrenal

Open solution

Q96. AIPMT 1995

According to the accepted concept of hormone action, if receptor molecules are removed from target organs, then the target organ will

(A) continue to respond to the hormone without any difference

(B) not respond to the hormone

(C) continue to respond to the hormone but will require higher concentration

(D) continue to respond to the hormone but in the opposite way

Q97. AIPMT 1994

Which of the following is the function of enterogastrone?

(A) It inhibits the secretion of gastric juice.

(B) It stimulates the secretion of digestive juices in the stomach.

(C) It stimulates the flow of pancreatic juice.

(D) It regulates the flow of bile.

Open solution

Q98. AIPMT 1993

Testosterone is produced by

(A) sertoli cells (B) Leydig's cells (C) oxyntic cells (D) pituitary gland

Open solution

Q99. AIPMT 1993

Gastric secretion is stopped by hormone

(A) enterogastrone (B) gastrin (C) pancreozymin (D) cholecystokinin

Open solution

Q100. AIPMT 1991

ADH or vasopressin is

(A) enzyme that hydrolyses peptides

(B) hormone secreted by pituitary that promotes reabsorption of water from glomerular filtrate

(C) hormone that promotes glycogenolysis

(D) energy rich compound connected with muscle contraction

Open solution

Q101. AIPMT 1991

Occurrence of Leydig's cells and their secretion is

(A) ovary and estrogen (B) liver and cholesterol

(C) pancreas and glucagon (D) testis and testosterone

Open solution

Q102. AIPMT 1990

Secretin stimulates production of

(A) saliva (B) gastric juice (C) bile (D) pancreatic juice

Open solution

Q103. AIPMT 1990

Insulin is a

(A) vitamin (B) lipid (C) hormone (D) enzyme

Open solution

Q104. AIPMT 1990

Addition of a trace of thyroxine or iodine in water containing tadpoles will

(A) keep them in larval stage
(B) hasten their metamorphosis
(C) slow down their metamorphosis
(D) kill the tadpoles

Open solution

Q105. AIPMT 1989

Release of pancreatic juice is stimulated by

(A) enterokinase
(B) cholecystokinin
(C) trypsinogen
(D) secretin

Open solution

Q106. AIPMT 1988

Which hormone possesses anti-insulin effect?

(A) Cortisol
(B) Calcitonin
(C) Oxytocin
(D) Aldosterone

Open solution

Q107. AIPMT 1988

MSH of pars intermedia of middle pituitary is responsible for

(A) darkening of skin in lower vertebrates
(B) light colouration of skin in lower vertebrates
(C) both A and B
(D) darkening of skin in human beings

These questions are on topics no longer in the current syllabus. They are kept for practice, after everything else.

Q108. NEET 2023 · MCQ (Single Correct Answer)

Match List I with List II.

	List I		List II
(A)	CCK	(I)	Kidney
(B)	GIP	(II)	Heart
(C)	ANF	(III)	Gastric gland
(D)	ADH	(IV)	Pancreas

Choose the correct answer from the options given below :

(A) A-III, B-II, C-IV, D-I
(B) A-II, B-IV, C-I, D-III
(C) A-IV, B-II, C-III, D-I
(D) A-IV, B-III, C-II, D-I

ExamGOAL
PYQ PDF

Your Exam. Our Responsibility.

From first chapter to exam day.

Practise with the questions your exam has already asked, then test yourself under real exam conditions.

PAST YEAR QUESTIONS

Every past paper, chapter-wise.

Previous year questions sorted the way you study, each with a full solution.

- Chapter-wise and year-wise
- Weightage and topic tags on every chapter
- Your progress on each one, at a glance

MOCK TESTS

Mock tests with a real exam feel.

Practise under the same pressure as the real paper, on your phone or on the big screen.

- Timed sections, just like exam day
- Mark questions for review and come back

ANALYSIS

Know your score. Know your rank.

A full report after every test, so you know exactly where you stand.

- Your percentile among everyone who took it
- Predicted real-exam percentile and All India Rank
- Subject breakdown and time analysis

PRACTICE

Solve. Check. Understand.

Learn from every question, not just the ones you get right.

- Instant answers as you practise
- Step-by-step explanations
- See how everyone else answered
